MEDICAL BILL EXCHANGE SYSTEM

PUB. NO.: 2002-092154 [JP 2002092154 A]
PUBLISHED: March 29, 2002 (20020329)
INVENTOR(s): NAKAMURA ATSUSHI
MORI MITSUHIRO
NISHIMURA MOTOYA
APPLICANT(s): NRI & NCC CO LTD
APPL. NO.: 2000-277127 [JP 2000277127]
FILED: September 12, 2000 (20000912)
INTL CLASS: G06F-017/60; G06F-019/00

ABSTRACT

PROBLEM TO BE SOLVED: To provide a **system** which **electronically** exchanges **reward** bill data and enables negotiation on terms and conditions for each for payment fee.

SOLUTION: This system supports transactions between a service provider (2), who provides a service as an insurance application object and issues a payment fee and an insurer (3) who receives the fee to pay a fee to the service provider, and the system receives payment fee data from the service provider and stores it (11) and receives a desired condition for transaction of the service provider side and stores it (11) and receives (18) a desired condition for transaction on the insurer side and stores it (19) and discriminates (15) whether both conditions agree with each other and **reports success** of a transaction to both the service provider and the insurer (14), when there is agreement of both conditions and prompts (14) at least one of the service provider and the insurer to re-input a desired condition for transaction when there is disagreement of both conditions.

Abstract (Basic): WO 200277917 A1

NOVELTY - Method of tracking the performance of distributors consists in registering the distributors, receiving data a using a network and relating to distribution of goods to stores by the distributors and tracking the performance of the distributors using the data. The data includes delivery dates associated with the goods, **performance** is displayed to the **stores** using a network based interface and the data is received from the stores.

DETAILED DESCRIPTION - There are INDEPENDENT CLAIMS for:

- (1) A system for tracking the performance of distributors
- (2) A computer program for tracking the performance of distributors
- (3) A method of managing a supply chain
- (4) A system for managing a supply chain
- (5) A method of tracking the sale of goods in a store
- (6) A system for tracking the sale of goods in a store
- (7) A method of forecasting the sale of goods in a store
- (8) A system for forecasting the sale of goods in a store
- (9) A method of planning promotions
- (10)
- (11) A system for planning promotions
- (12) A method for processed product supply chain reporting
- (13) A system for processed product supply chain reporting
- (14) A method of providing a network-based supply chain interface

- (15) A system for providing a network-based supply chain interface
- (16) A system for evaluating the success of a promotion
- (17) A method for providing a restaurant supply chain management interface network
- (18) A system for providing a restaurant supply chain management interface network
- (19) A system for identifying goods in a network-based supply chain management framework
- (20)
- (21) A method of tracking goods in a network-based supply chain management framework
- (22) A system for tracking shipment of goods in a network-based supply chain management framework
- (23) A method of reporting in a network-based supply chain management framework
- (24) A system for reporting in a network-based supply chain management framework
- (25) A method for cost reporting in a network-based supply chain management framework
- (26) A system for cost reporting in a network-based supply chain management framework
- (27) A method for promotion reporting in a network-based supply chain management framework
- (28) A **system** for **promotion** reporting in a **network** -based supply chain management framework
- (29) A method of generating supply chain statistics
- (30) A method for navigating a user in a network-based supply chain management interface
- (31) A system for navigating a user in a network-based supply chain management interface
- (32) A method of tracking the performance of suppliers
- (33) A method for inventory management using a network-based framework
- (34) A system for inventory management using a network-based framework
- (35) A system for forecasting the sale of goods
- (36) A system for normalizing data in a supply chain management framework
- (37) A method of providing network-based supply chain communication between stores, distributors, suppliers, a supply chain manager, and his office
- (38) A system for providing network-based supply chain communication between stores, distributors, suppliers, a supply chain manager, and his office
- (39) A system for providing feedback on forecasting relating to the sale of goods in a store utilizing a network-based supply chain management framework
- (40) Many more given

USE - Method is for managing supply chains as applied to manufacturing and sales.

DESCRIPTION OF DRAWING(S) - The figure shows an electronic reporting and feedback system.

Abstract (Basic): JP 2002157466 A

NOVELTY - A retail-store information database (12) **stores** the order-received **performance** and delivery of goods **performance** information of a retail **store** whose goods information are stored in another database (11). When a customer transmits a goods search requisition, the required goods information are searched in the database (11) and transmitted to the customer along with handling information such as discount from the database (12).

USE - For promoting sales through internet for retail stores.

ADVANTAGE - Customer coming to the store is promoted, since many selling opportunity such as discount coupon, etc., are provided by the retail store at the same time. The advertisement of the retail store is also enhanced.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of structure of the computer-based sales promotion system. (Drawing includes non-English language text).

Abstract (Basic): JP 2001229324 A

NOVELTY - The artist performance information and the information of **performance** area which user voted are **stored** in respective databases (11,13). A data processor (16) processes **stored** data and determines artist **performance** schedule corresponding to which voted performance area is established.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(a) Artist performance promotion method;

(b) Information processor used for artist performance promotion

USE - For retrieving performance of artist of whom the user or ticket purchaser expects through internet.

ADVANTAGE - As the artist performance is known to user beforehand, risk of user is reduced.

DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of artist performance promotion system. (Drawing includes non-English language text).

Abstract (Basic): WO 200113306 A2

NOVELTY - Predetermined **goal** data of participant is **stored** (330), **goal** data includes at least one minimum threshold level of **performance**; **storing** historical **performance** data of the participant (320); comparing historical performance data to predetermined goal (340) and generating a result which is transmitted to at least one destination (360).

DETAILED DESCRIPTION - Reward data corresponding to each of the at

least one minimum threshold level of **performance** is also **stored** with predetermined **goal** data. The predetermined data can be an amount of sale attributed to the participant, measure of compliance with safety rules, the measure of compliance being attributed to the participant, measure of efficiency attributed to the participant, measure of training completed by participant, measure of cost saving attributed to the participant, measure of number of displays installed by the participant, and/or measure of number of demonstrations conducted by participant.

INDEPENDENT CLAIMS are also included for the following: A computer readable medium having computer executable instructions; and A system for transacting in electronic commerce.

USE - For stimulating and evaluating performance according to predetermined goals.

ADVANTAGE - Records self-selected goals and performance of participants, compare performance to the goals, assigns rewards to the participants pursuant to the comparison and heuristically adjusts the rewards threshold based on the prior history of achievement and performance of the participant.

DESCRIPTION OF DRAWING(S) - The figure shows a flowchart of a method performed by a computer.

ABSTRACT

PROBLEM TO BE SOLVED: To provide a success reward type advertisement publicizing method by constructing a system capable of surely confirming whether or not a fixed result is obtained for an advertisement.

SOLUTION: This system is composed of client side terminal equipment 1 for requesting the publication of the advertisement, an information management server 2 for gathering and managing requested advertisement information and user side terminal equipment 3 connected with the information management server 2 through a communication network N for receiving the provision of the managed advertisement information. The information management server 2 is provided with an authentication number confirmation means 22 for performing the confirmation work of an authentication number issued from a client to a user to the client side terminal equipment 1 when the authentication number is sent from the user side terminal equipment 3 through the communication network N and a request information storage means 23 for storing the request information of a success reward corresponding to the authentication number altogether for the respective clients at the time of receiving the notification of confirmation completion from the client side terminal equipment 1 for the confirmation work.

Abstract (Basic): US 20020087410 A1

NOVELTY - A customer record of the account and sub-account holders is retrieved. A reward level is determined and allocated, to the existing account and sub-account holders, after the completion of transaction with the existing holders. The retrieved record is updated by increasing the reward level of existing holders by the allocated reward level.

USE - For rewarding incentives to the customers of retail shop, fast food restaurant and clubs.

ADVANTAGE - Enables the **reward system** to **track the performance** data of the account holder linked to a single frequent shopper account, thereby achieving provision of rewards of incentives to the customers.

US 20020169668 A1 G06F-017/60 Provisional application US 2001267585

Abstract (Basic): WO 200265237 A2

NOVELTY - An alphanumeric sequence is applied to a product (100), so that when the product is purchased (102), the purchaser can view the hidden sequence and access a web page of the offline retailer (104) for access to an associated promotional offer. The purchaser can then choose an item (114), redeem any discount associated with the

promotional offer (118) and purchase the desired item (120).

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for an article of manufacture including a computer readable medium comprising, a first software component for providing a value responsive to receiving an alphanumeric sequence from a first product, a second software component for directing a user to a web site for purchasing a second product and a third software component for purchasing the second product using the value.

USE - For use in providing promotions using a network such as the Internet or a cellular network.

ADVANTAGE - The promotion provision method empowers an entity, such as a manufacturer, distributor, retailer and/or advertiser, with a plug-and-play, Internet-based promotions infrastructure that allows them to offer real value, such as coupons, money and prizes, to their consumers. The system allows users to launch a variety of **promotion programs** to achieve specific marketing **goals**, and maintains all data gathering, **storing** and accountability for all programs, resulting faster development of promotions.

DESCRIPTION OF DRAWING(S) - The figure is a flow chart describing a method for providing promotions over a network.

Abstract (Basic): WO 200256530 A2

NOVELTY - The method involves making content available to an individual. Attention of the individual to the content is tracked. Rewards are provided to the person based at least in part on the tracked attention.

The content comprises a live presentation presented at a physical commerce location.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are included for a method of identifying customers for enhanced customer service, for a **system** for providing a **rewards program** and for a storage medium.

USE - For **incentive reward program**.

ADVANTAGE - **Tracks** and rewards specific **performance** of individuals in paying bills earlier in time individually and on ongoing basis to efficiently encourage and influence earlier receipt of money.

DESCRIPTION OF DRAWING(S) - The figure shows a high-level process flow in a method.

US 20020035506 A1 44 G06F-017/60

Abstract (Basic): US 20020035506 A1

NOVELTY - The system has a series of computer programs to modify preset structures such as employee group structure, incentive factor score table structure, factor percent allocation of incentive factor to employee group structure and profit allocation to employee group structure by accepting input by users. The output such as periodic employee bonuses is calculated based on the preset structures and input data.

USE - For creating incentive and compensation plans to motivate and reward employees of variety of businesses.

ADVANTAGE - The incentive and compensation plans are fully automated and the personal performance, **goal** attainment, incentive reward and the **feedback** from members are obtained, hence the productivity and profitability are improved.

DESCRIPTION OF DRAWING(S) - The figure shows the flowchart explaining the incentive plan design and implementation process.

Abstract (Basic): US 20010049084 A1

NOVELTY - The information in data banks of **rewards based system**, are extracted to obtain information indicating complete learning objective or goal. The user's answers to questions and puzzles are tracked to **evaluate** user's progress towards **goal** and provides **feedback** information from a software. Mentor encompasses an engine of artificial intelligence to produce messages that motivate user for achieving the goal.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(a) Rewards based learning paradigms creating apparatus;

(b) **Rewards** based objectives creation **program**

USE - For motivating learning skills of user by awarding credits such as scholarships in educational and entertainment systems.

ADVANTAGE - Provides creative, entertaining and interactive learning environment accompanied by a progressive and redeemable reward to the user. Receives rewards by performance and thereby gains the skills through experimentation and the ability to perform desirable tasks. Provides a continuous iterative experience similar to real on the job' experience that is continuous iterative learning in real world environment.

DESCRIPTION OF DRAWING(S) - The figure depicts the tasks of teaching and learning with feedback response and intelligent tutoring within a simulated setting.

Abstract (Basic): JP 2001243214 A

NOVELTY - A customer analysis unit analyzes sales performance data.
A sales promotion setting unit sets sales promotion process. The
customer database is accessed through network by multiple analysis
terminals. Execution of the set sales promotion process is based on
analysis of marketing data and analysis of customer's purchase
performance data.

USE - Customer analysis system for evaluating sales profit
effectively.

ADVANTAGE - Sales promotion process is executed rapidly and
evaluation of sales **performance** data is performed easily and
efficiently.

DESCRIPTION OF DRAWING(S) - The figure shows the main screen of
customer analysis system. (Drawing includes non-English language text).

US 6049779	A		13	G06F-017/00	

Abstract (Basic): US 6049779 A

NOVELTY - Performance metric of business transactions conducted by person operating computing device, is electronically monitored. The metric is then electronically **compared** with an established **performance** metric standard. The person is allowed to participate in a game and is enabled to access the game via computing device, when the metric meets with the standard.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for agent **incentive system**.

USE - For person conducting business interactions.

ADVANTAGE - Customer reward should not be delivered until call termination, to avoid providing rewards for ineligible calls. The agent can override the reward mechanism, if the call is negligible.

DESCRIPTION OF DRAWING(S) - The figure shows motivating method of call center agent using a call center system.

Patent Details:

Patent No	Kind	Lan	Pg	Main IPC	Filing Notes
US 6018718	A		17	G06F-017/60	

Abstract (Basic): US 6018718 A

NOVELTY - The system involves the step of accessing historical account data associated with the financial account, then determining a first performance target associated with the financial account and then selecting a reward offer having an associated reward description and transmitting the first performance target and the reward description to the account holder.

DETAILED DESCRIPTION - Transaction data associated with the financial account is collected and **evaluated** to determine a second

performance target associated with the financial account. The collected transaction data is then **compared** to the first **performance** target. If the collected transaction data exceeds the first performance target, the financial account is updated to reflect the **reward**. A computer **system** to implement the method is also claimed.

USE - For managing and providing a **reward program** to an account holder, especially a credit card account holder.

ADVANTAGE - The account holder is encourage to use their account more to take advantage of the **reward program**.

DESCRIPTION OF DRAWING(S) - The figure shows the computer steps implemented to set rewards.

JP 2001522102 W 39 G06F-017/60 Based on patent WO 9923596

Abstract (Basic): WO 9923596 A1

NOVELTY - A method for administering a **reward program** based on a series of registrations, each registration corresponding to a purchaser, comprises calculating a **measurement** of product **success**; determining if the **measurement** is within a predetermined range; selecting from the series of registrations a set of registrations which are early adopter registrations; and providing a reward to each early adopter purchaser if the measurement is within the predetermined range.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- a method for administering a **reward program**;
- a method for administering a **reward program** based on success of at least one of a plurality of products.

USE - For manufacturers, distributors or other sellers.

ADVANTAGE - Provides consumers with an incentive to buy a product earlier than they otherwise might have or buy a product they might not have otherwise bought. Purchasers may be able to recover the typically large cost of purchasing a new product by receiving rewards for early purchases of the product. Enables sellers to sell products earlier, and even increase sales of products. Permits a seller to recover the investment costs of new products earlier in the product life cycle.

DESCRIPTION OF DRAWING(S) - The schematic illustrates a central controller of the apparatus for administering a **reward program** in accordance with the invention.

NOVELTY - A group for participation is registered in a group reward program . The group includes two consumers. A performance of the group is measured and a goal achieved by the group is stored . An eligibility of the group to receive the group reward is determined based on a performance and the goal . The performance is compared to the goal and an eligibility of the group to receive the group reward is determined based on the compared performance and the goal .

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for a method for participating in a group reward program , an apparatus for managing a group reward program , a computer readable medium encoded with processing instructions for implementing a method for managing a group reward program , a method for implementing a group reward program , a method for implementing a consumer group reward program , a method for processing a transaction in accordance with a group reward program , an apparatus for implemented a group reward program , an apparatus for processing a transaction in accordance with a group reward program .

USE - For computer applications, point of sale system.

ADVANTAGE - Allows two or more consumers to register as a group or shopping team with merchant who manages a group reward program .

DESCRIPTION OF DRAWING(S) - The figure shows a schematic block diagram illustrating a network server that controls the network of point of sale terminals maintained by a merchant in accordance with an embodiment of the invention.

Abstract (Basic): EP 891084 A

NOVELTY - A controller transmits program services to subscriber terminals via a communication channel and delivers digital coupon information to the terminals. The coupon information allows the terminals to obtain credits when recovering program services according to preconditions. The terminals maintain a running balance of the credits obtained and monitor terminal usage patterns to determine whether the preconditions of the digital coupon pattern have been satisfied.

USE - Coupons are for cable TV, satellite TV and computer networks over which services are available for a fee. It enable users to obtain credits when viewing particular programs, enabling service providers to transmit credit card information in the form of digital coupons to individual subscriber terminals to promote particular **programs** and **reward** viewer **loyalty**.

ADVANTAGE - Coupons allow selective targeting of promotions of programming services to particular subscribers without placing services in free mode or using paper coupons. It allows users to e.g. purchase pay-per-view programs, allows the user to take a quick inventory, allows credit use flexibility and **monitors** the **success** of promotions, while using cryptographic techniques to thwart pirating.

Abstract (Basic): US 5577915 A

The device that organizes chores, or other activities or things, into categories and provides an **incentive system** for their performance. The device has a plurality of cards representing activities or things in pictures and text for attachment to a sheet.

The sheet has a chart with ranks and files, separated by white space to improve readability. The ranks are divided into different categories and the files represent time units over which **performance** is being **tracked**. Completion of the chores or other activities or things in the ranks is indicated by markings on the files.

ADVANTAGE - Allows a parent or caregiver to set a reward.

Patent Details:

Patent No	Kind	Lan Pg	Main IPC	Filing Notes
US 5484998	A	9	G06K-019/06	

Abstract (Basic): US 5484998 A

The system includes a number of spaced vertical stripes printed on a contrasting field, such that they form a pattern appearing as a sequence of alternating dark and light stripes, the stripes being of only two possible widths, wide or narrow. The pattern represents data coded according to a decoding method in which two successive light or two successive dark stripes are discrete pairs of different width and the **comparison** of two **successive** light or two successive dark stripes represents one possible binary signal.

If the sequence is wide/narrow and represents the other possible binary signal if the sequence is narrow/wide, wherein the pattern is divided into right-side and left-side segments. The decoding method applied to the left-side segment is the opposite logic of the decoding method applied to the right-side segment without altering the pattern coding.

USE/ADVANTAGE - As printed code identification system used for sweepstake membership club, frequent buyers **reward**, security **system**, inventory control and amusement games. Allows use inexpensive in production reader and reliable during operation.

EP 308224	A	E 46		

Designated States (Regional): BE CH DE FR GB IT LI NL SE

Abstract (Basic): EP 308224 A

The incentive award program system has computer memory for
data storing of information identifying participants, and credit
instruments for participants. A computer data processor assigns
individual credit instrument account numbers and corresponding accounts
to individual participants. A computer memory stores levels of
performance to be achieved by participants under the incentive
program.

The participants have money paid to the participants' credit
instrument accounts. A computer data processor allocates monetary
amounts to be available for use through the individual participant's
credit instruments based on the participant's meeting of a level of
performance under the incentive program.

USE/ADVANTAGE - Company sales promotion. Profitable.

Abstract (Basic): US 4685677 A

The game control system comprises a memory with locations for storing default values for award levels and award percentage and operators selected values for award levels and desired award percentage. Also further locations temporarily store selected portions of the default and operator selected values and historical data on players' scores and current game data. An input permits operators selection of the values.

A microprocessor receives the data relating to players' scores award levels, award percentage and current game data from the memory locations to periodically modify the award level values to maintain either the default or the operator selected award percentage and giving player awards as earned. Data is communicated between the microprocessor, the memory, the input and the system is interfaced to game switches and displays.

USE - Pinball and video games.

Priority Applications (No Type Date): GB 7920274 A 19790611; GB 7826959 A 19780614

Abstract (Basic): GB 2023098 A

The trading **system** has a **bonus** given to a pseudo-randomly elected customer. A series of **stores**, e.g. counters are fed **successively** to be filled successively depending on the feed rate and the capacities of the counters. When a store is filled, feeding is stopped and the bonus appropriate to the filled store made available to a subsequent customer initiating a transaction.

The filled store is emptied and feeding to the stores resumed until another store is filled and the appropriate bonus paid. A random selector can scan the stores to make the bonus available if a full store is selected
